Madrid, Spain

Core Focus

Java · Spring Boot · AWS · Kubernetes · AI Integration · Data Engineering · Automation

Experience

VDenergy · Backend Engineer

Mar 2023 - Present · Madrid, Spain

Backend engineer specialized in microservices, automation and AI integration applied to the energy sector.

- Development and evolution of Java microservices with Spring Boot.
- Design and implementation of REST APIs for internal platforms.
- Mass data processing with Python and SQL.
- OpenAI and Anthropic integrations to automate business processes.
- AWS, Docker and Kubernetes deployments.
- Resolution of critical production incidents.
- Automation of internal processes, reducing operational time by up to 80%.
- Implementation of OCR + LLM systems with more than 98% accuracy.

Selected Systems

OCM Brain

AI Platform

Internal AI platform for commercial insights, lead scoring and intelligent assistance for sales teams.

Energy Simulator

Internal Platform

Platform for simulating energy offers and automating complex calculations and pricing scenarios.

Smart OCR

AI Automation

OCR + LLM extraction pipeline with structured validation and more than 98% accuracy.

Data Processing

Data Engineering

Large-scale data processing, cleanup and ETL automation with more than 900,000 records handled.

Technology

Java, Spring Boot, Python, FastAPI, AWS, Docker, Kubernetes, PostgreSQL, MySQL, Redis, SQL, OpenAI, Anthropic, OCR, Pydantic, Next.js, TypeScript
